# Plate cleaner

1) .**CTP plate cleaner**: Use to clean the conventional ink on the plate. As the curing ability of conventional ink is not that strong compared with the UV ink, and the coating of the plate is thin, so this type of cleaner should not have excessive cleaning capacity.
2) **UV plate cleaner**: Use to clean the UV ink on the plate. As the curing ability of UV ink is strong, and the coating of the plate is thick, so this type of cleaner should have strong cleaning capacity.

**So we suggest you use the 2 types cleaner separately, the effective will be better and also more cost effective**

## For CTP plate cleaner, we have 2 types as below:

**Type 1**: This type cost is low, price is 10.1 rmb/kg currently, but the cleaning ability is not that good, need to wipe for a few times, and easy to generate layering phenomenon

**Type 2**: This type price is 12 rmb/kg currently, it can remove the dirty easily, do not have layering phenomenon, this one is the best selling type in China, we recommend you to use this quality.

## For UV plate cleaner, we have 1 type as below:

**Type 1**: Price is 12 rmb/kg currently, it can remove the dirty easily, do not have layering phenomenon, this one is the best selling type in China, we recommend you to use this quality.

## Remarks:

We also have the combined function plate cleaner, this type can be used for both conventional and UV ink, but the cost is very high, 22.7 rmb/kg currently, and the cleaning capacity may not very good for UV ink
